Press Release

Legendary Logcrafters Limited and Hybrid Building System announce the introduction of their Preliminary Design/Construction Consultation & Analysis Service

Collingwood, ON – Aug 2011 Legendary Logcrafters Limited and Hybrid Building System are pleased to announce the introduction of a Preliminary Design/Construction Consultation & Analysis Service for their clients in Ontario.

Legendary & Hybrid's Consulting and Analysis Service begins with a site visit to determine the best placement for their customers' new home or cottage to ensure the advantages of the property are maximized including passive solar gain, grading optimization and incredible views.

Conceptual 3-D designs that include a full set of exterior elevations and two (2) floor plans are also part of the Service. Using their years of custom home design experience, Legendary/Hybrid will work with their clients to develop concepts based on the outcome of the site visit and their customers' own ideas.

The final element of the Service is developing a construction cost analysis. This provides their clients with a very good idea of the overall cost of the project and how it fits within their budget.

Milan Smeh, president, commented, "We have always included a design service with our log, Hybrid Building System Post & Beam and Timber Frame home packages but we wanted to offer our clients something more. With this new Service we will work with our clients to design a home, cottage or chalet to maximize the benefits of their property and fits within their projected costs. I believe these elements are critical to the success of any build project and need to be explored before a client goes to contract."

The Consultation & Analysis service is available to clients in Ontario only. Please contact Legendary Logcrafters Ltd. or Hybrid Building System for full details, costs and restrictions at (705) 444-0400 or email legendary@legendarylog.com / info@hybridbuildingsystem.com.

About Legendary Logcrafters Limited

Legendary Logcrafters Limited is based in Collingwood, ON, Canada and has been in operation since 1992. Dedicated to building the finest handcrafted log, Post & Beam and Timber Frame custom homes available today, Legendary Logcrafters Limited offers its clients a range of products and design options with plans ranging from 1,000 sq. ft. to more than 3,000 sq. ft. in a variety of styles including ranch & raised bungalows, story and a half, and two story Cape Cod. The company also offers full customized design services. Installation is included with all packages and is available throughout Canada, the U.S.A. and internationally.

About Hybrid Building System

Hybrid Building System is a prefabricated Post & Beam / Timber Frame prefabricated building solution for custom homes, cottages, chalets, cabins, bunkies, garages, barns, commercial structures and more. Modular panels and proven construction methods are used to cut the cost and time of building new structures. This unique, eco-friendly and cost effective system integrates panellized engineering with the builder's art of 'Post & Beam' construction. Plans range from 1,000 sq. ft. to more than 3,000 sq. ft. and a customized design service is offered. A variety of styles is available including ranch & raised bungalows, story and a half and two story Cape Cod. Installation is included with all package and is available throughout Canada, the U.S.A. and internationally.
